

Split Level Building - 3D Architect Home Designer Basic and Expert

1) Create ground floor to main building in normal way e.g.

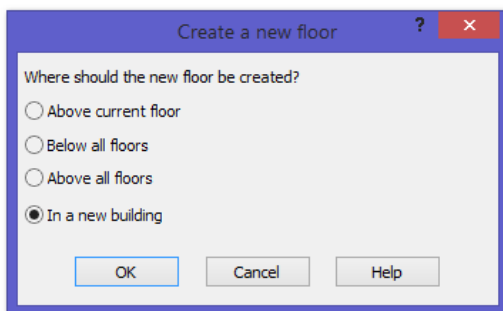

2) To create a separate building that is lower to main building follow steps below::

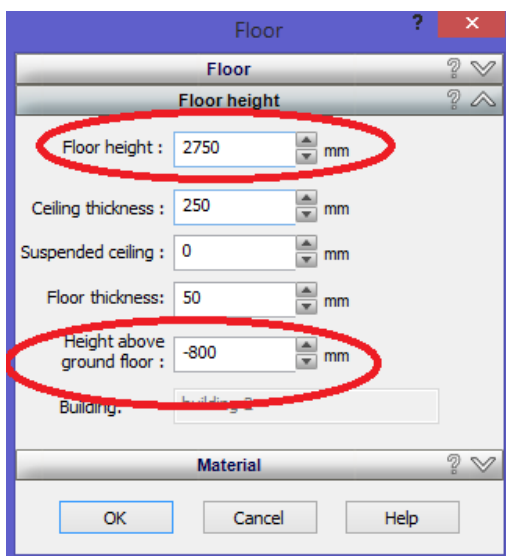

3) From 'Floors' dropdown in top horizontal bar, select 'New Floor'

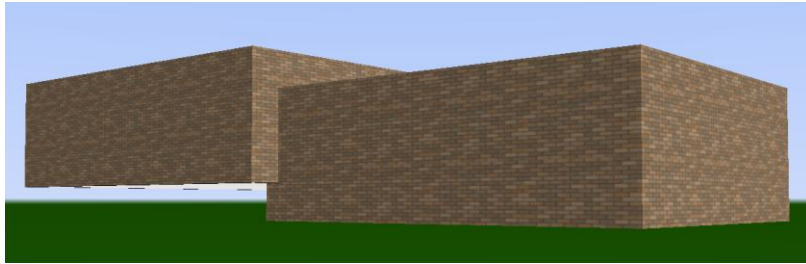

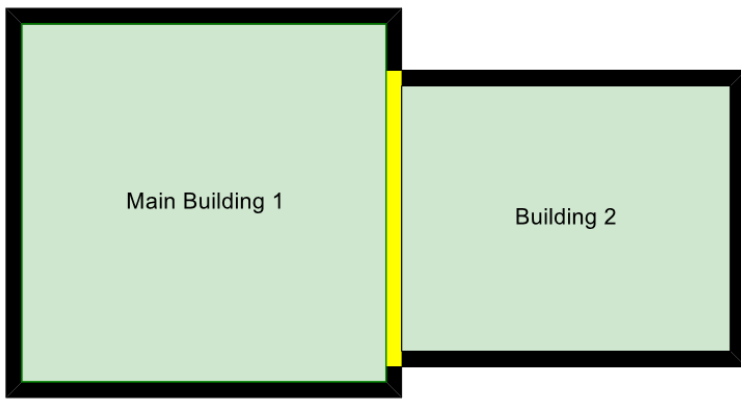

4) In dialog that appears, select new floor 'In a new building'. Click OK and enter title of building.

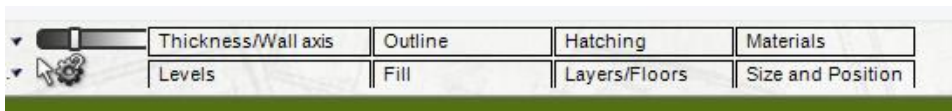

5) The 'Floor' dialog will appear. Here you can copy walls across if required or none at all, define floor name and more importantly define the Floor height and Height above ground level. Click OK when finished.

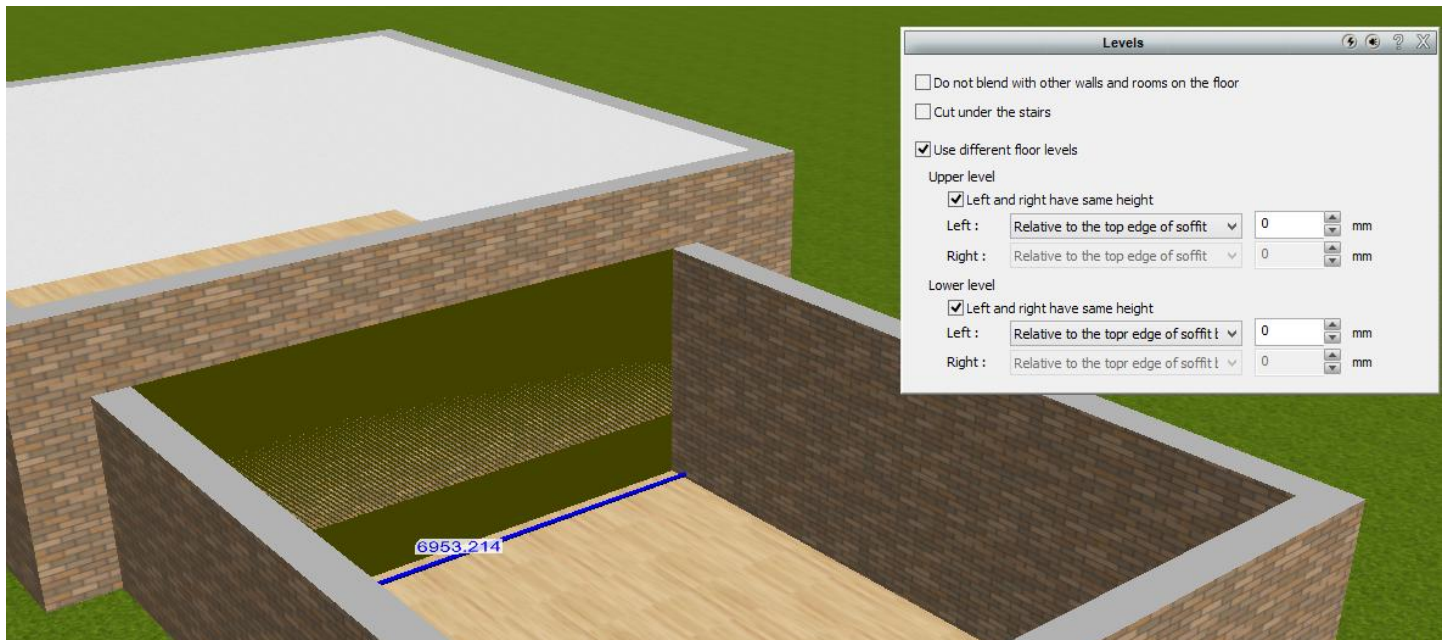

6) Now draw in the walls for Building 2. Overlay wall (yellow) to existing wall

7) Select the inside wall of Building 2 (the one above marked Yellow) and in the horizontal toolbar at top, select the tab for 'Levels'

8) In the 'Levels' dialog, select 'Use different floor levels'

9) Here you need to reduce the height of Building 2 wall (highlighted) so that the upper level of it meets the lower level of Building 1 wall - see below example
